VSAT SERVICES FOR RENEWABLE ENERGY

Providing reliable connectivity services for improving operational effectiveness

With an existing installed base of 50,000+ VSATs on its network, Nelco is a leading VSAT player in the country and offers satellite communication services to both enterprise and government customers across different industry segments for mission critical applications.

Through our TATA group lineage, we bring to our customers a proven legacy of thought leadership with respect to customer-centricity and technology.

VSAT Services for Renewable Energy sector

Nelco has developed a specialized solution for the Energy sector for providing desired performance, stability and uptime. We provide the desired Quality-of-service and priority for each of your applications such as SCADA system, back office systems, real time video, etc. Our network engineering team is committed to work shoulder-to-shoulder with you in fine-tuning and migrating any application onto the network.

The overall solution provides you with a reliable and secured network for improving your operational effectiveness, while safeguarding your valuable data.

- 20+ years of experience in running VSAT services
- Reliable and robust connectivity - 24 x 7 x 365
- Present in remotest parts of the country - committed to faster turnaround time
- Customer centric innovation in products and services to address the industry challenges
- Proactive voice-of-customer listening mechanisms for continuous improvement in services and support
- Focus on customer experience
- Dynamic project management to deliver your project on time
- Swift and firm governance for regulatory matters

Reliable and secured connectivity for improving operational effectiveness of Renewable Energy sector

Requirements from Renewable Energy sector

- Reliable connectivity with high uptime for tracking operations of remote power plants centrally.
- Uninterrupted and secured data feeds from RTU/PLC to SCADA systems for power balancing decision support and proactive/ predictive maintenance through analytics.
- Swift deployment, flexibility and cost effectiveness of connectivity services.

Nelco Advantage

- Reliable and Robust System with best in industry uptime.
- Domain specific expertise in Renewable Energy sector.
- Experienced team with customer centric approach for understanding criticality of customer's applications.
- Reliable two way communication enabling PLC/RTU monitoring, O & M support, VC between Project Office and HQ, VOIP in CUG.
- Redeployment of Hardware at different project office.
- Flexibility to upgrade and downgrade bandwidth based on the requirement. (from as low as 1 kbps to 2048kbps per site in simplex mode - Up and Down is separate).
- Pool Bandwidth - reusability among different locations.
